But regardless of how much material there is, there are four key elements to keep in mind when applying organizational behavior theory to the workplace. They are people, structure, technology, and environment.

What is Robbins model of OB? Robbins defines organisational behaviour as “a field of study that investigates the impact that individuals, groups and structures have on behaviour within organisations for the purpose of applying such knowledge toward improving an organisation's effectiveness.”

What are the focal points of OB? It focuses on the individuals, the groups and the organization and also on their interactional relationships. These are Autocratic, Custodial, Supportive, and Collegial.

Second, to understand why individuals behave how they do. Third, to influence the behavior of individuals in the workplace to meet the goals of the business.

The behavioral sciences that make up the OB field contribute an element to each of these levels.

Y items have a moderate amount of demand variability, usually because of a known factor. Z items have the highest demand variability and are therefore the hardest to forecast.

Organizational culture will be directly impacted by the individual or group of people at the top of the hierarchy, as well as the labor being performed.
