### **To Be a Slave: An Interview with Julius Lester**

**Q: Can you describe how it feels to be a slave?**

**A:** Slavery is a state of utter powerlessness and degradation. The master owns your body, your mind, and your spirit. You are a mere chattel, a tool to be used and discarded at his whim. You have no rights, no

freedom, and no hope.

**Q: What is the worst thing about being a slave?**

**A:** The worst thing about being a slave is the constant terror. You never know when you might be whipped, beaten, or even killed. You live in perpetual fear, constantly waiting for the next calamity to strike.

**Q: How do you maintain hope when you're a slave?**

**A:** It is incredibly difficult to maintain hope when you are a slave. However, some slaves find solace in religion or in the belief that one day they will be free. Others find hope in the love and support of their fellow slaves.

**Q: What is the best thing about being a slave?**

**A:** There is no best thing about being a slave. However, some slaves find a sense of community and belonging among their fellow slaves. They learn to rely on each other for support and comfort.

**Q: Do you think it is possible to be free after slavery?**

**A:** Yes, I believe it is possible to be free after slavery. However, it is a long and difficult journey. Former slaves must overcome the psychological and emotional scars of their experiences. They must also find a way to rebuild their lives in a society that often views them as inferior. However, with determination and support, it is possible for former slaves to achieve freedom and happiness.

**Section 20.1: The Kingdom Protista**

**Answer Key**

**1. What are the key characteristics of protists?**

- Eukaryotic organisms
- Most are unicellular, but some are multicellular
- Can be autotrophic, heterotrophic, or mixotrophic
- Can live in aquatic or terrestrial environments

**2. What are the main groups of protists?**

- Plant-like protists (algae)
- Animal-like protists (protozoa)
- Fungus-like protists (slime molds and water molds)

**3. What are the major roles of protists in ecosystems?**

- Primary producers: Algae produce oxygen and are food for other organisms.
- Consumers: Protozoa graze on bacteria and other protists.
- Decomposers: Slime molds and water molds break down organic matter.

**4. What are some examples of important protists?**

- Diatoms: Photosynthetic algae that form the base of the food chain in the ocean.
- Paramecium: A protozoan that feeds on bacteria.
- Plasmodium: A protozoan that causes malaria.
- Trichoderma: A fungus-like protist that is used as a biocontrol agent.

## 5. How has the understanding of protists changed over time?

- Traditionally, protists were considered a "catch-all" category for organisms that did not fit into the kingdoms of plants, animals, or fungi.
- Advances in microscopy and molecular biology have led to a better understanding of the diversity of protists.
- Today, protists are recognized as a separate and distinct kingdom with a wide range of ecological roles.
